

IBEX - International Biotechnology Experts Source and Transfer Innovative Technologies

**Are you an SME looking to acquire innovative technologies,
or do you have a technology to offer to others?**

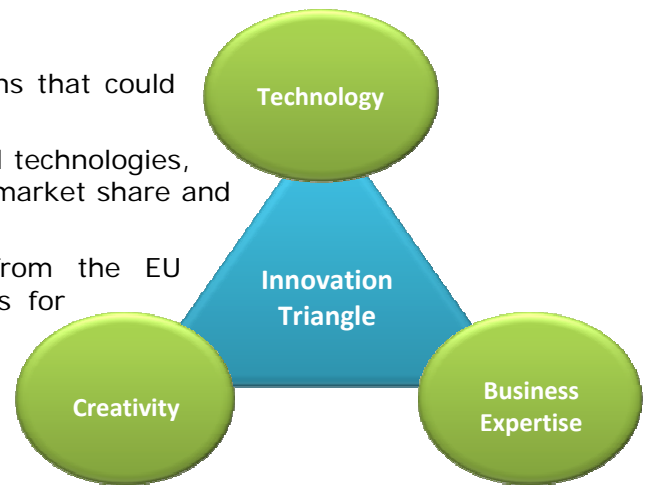

IBEX will help to match you with appropriate institutions

Together we will...

- identify technology gaps in your R&D pipeline, source innovative technologies and apply for external funding opportunities relevant to SMEs
- identify gaps in the market where your technologies could be transferred
- identify national or EU funding sources to support your R&D

What is our added value?

- € We lower your R&D costs by sourcing institutions that could provide you with innovative technologies
- € We reduce the time it takes to exploit your novel technologies, which increases your competitiveness, potential market share and technology leadership
- € We identify appropriate financial resources from the EU dedicated to SMEs and write grant applications for you
- € We raise the quality of your business documents to increase your market exposure

Examples of our success...

- ✓ We have detected innovative breeding technologies at leading European universities and research institutions for a consortium of international vegetable seed companies.
- ✓ We helped a Danish company, specialising in biologicals for neurological disorders, to join a trans-European consortium focusing on novel treatment for deafness.
- ✓ We helped a Cypriot geoinformatics company to become a partner in an international project focusing on obesity prevention in the Mediterranean area.

IBEX Team

IBEX has a trans-European team of technology transfer experts who are well-connected to Europe's leading university and research institutions. The team spirit is entrepreneurial, target-oriented and pro-active.
